

{- a multiline comment

Trick to comment/uncomment

True/False : Bool			
42 : number			
(Int or Float)			
3.14 : Float			
'a' : Char			
"abc" : String			
multi-line String			
"""For JSON data or			
"quotations"."""			

Literale

#### **Comments Tuples** Can contain 2 or 3 items of -- a single -- line comment

```
{- can be nested -}
                    The Elm Architecture
```

```
blocks of code
add x y = x + y
--}
```

```
different type.
```

```
(1,"2",True)
```

```
Browser, sandbox
Browser.element
Browser.document
Browser.application
-- headless
Platform.worker
```

```
A collection of items of the same type
```

Lists

### [1,2,3,4]1 :: [2,3,4]1 :: 2 :: 3 :: 4 :: []

## Records A collection of key/value pairs, similar

```
to objects in JavaScript
point = { x = 0, y = 0 }
point.x == 0
-- field access function
List.map .x [ point, point2 ]
-- update a field
\{ point \mid x = 6 \}
-- update many fields
{ point | x = point.x + 1
        y = point.y + 1
```

### Extensible Records have at least certain fields:

```
f: { b | key : a } -> a
f = .key
```

```

#### Functions start with a lower case letter. No parentesis or commas for arguments or code blocks. square $n = n^2$

**Functions** 

```
hypotenuse a b =
 sqrt (square a + square b)
```

## Anonymous functions start with "\". that resamble lambda "λ"

```
square = n \rightarrow n^2
squares =
  List.map (n \rightarrow n^2)
     (List range 1 100)
```

</script>

```
Debug.toString
Debug.log
Debug.todo
```

## Debugging

**Operators** 

```
() Unit, Never
```

## **Conditionals** if powerLevel > 9000 then

```
"OVER 9000!!!"
else
    "meh'
if key == 40 then
   n + 1
else if key == 38 then
   n - 1
else
```

#### REPL Commands

elm repl	:exit
elm init	:help
elm reactor	:reset
elm make	
elm install	Backslash (\) fo
elm bump	multi-line
elm diff	expressions
elm publish	

### **Tools**

### JavaScript Interop Ports, incoming and outgoing values:

**Anonymous functions Optimizations** 

```
port prices : (Float -> msg) -> Sub msg
port time : Float -> Cmd msg
```

From JS, start Elm with flags and talk to these ports:

```
<div id='app'></div>
<script src='elm.js'></script>
<script>
var app = Elm.Main.init({
 node: document.getElementById('app'),
 flags: { key: 'value' }
app.ports.prices.send(42);
app.ports.time.subscribe(callback);
```

## **Pipe Operator**

app.ports.time.unsubscribe(callback);

```
viewNames1 names =
   String.join ", " (List.sort names)
viewNames2 names =
    names
        |> List.sort
        |> String.join ", "
viewNames3 names =
   String.join ", " < | List.sort names
```

```
+ - * /
                     math
                     int division
== /=
                     equality
< > <= >= max min comparison
not && || xor
                     booleans
                     append
modBy remainderBy
                     fancy math
                     bitwise
and or xor
   |> << >>
                     functions
                     cons
```

Most can be used in "prefix notation" too: a + b == (+) a b

```
Modules Imports
```

#### import List -- preferred import List as L import List exposing (..) import List exposing ( map, foldl ) import Maybe exposing ( Maybe ) import Maybe exposing ( Maybe(..) )

## Side Effects Task/Cmd

Task.perform	Task.attempt
Task.andThen	Cmd.batch
Tasks can be chained.	Cmds only batched.

#### module Main exposing (main) import Html exposing (..) main = div [] [text "Hello World!"]

**Hello World** 

## Hello World with Flm-UI

```
module Main exposing (main)
import Element exposing (..)
main =
 layout [] <
   el [] [text "Hello World!"
```

## Pattern Matching

```
Just xs -> xs
    Nothing -> []
case xs of
    [] ->
      Nothing
    first :: rest ->
      Just (first, rest)
case n of
   0 -> 1
   1 -> 1
    _{-} -> fib (n-1) + fib (n-2)
```

case maybeList of

```
Available at https://ellie-app.com/
```

```
type Msg = Increment | Decrement
update msg model =
case msg of
 Increment -> {model
                       count = model.count+1}
 Decrement -> {model
                       count = model.count-1}
```

```
view model =
 div []
  [ button [onClick Increment ] [ text "+1"]
   , div [] [text<|String.fromInt model.count]
    button [onClick Decrement ] [ text "-1"]
```

```
main =
 Browser.sandbox
    { init = initialModel
    , view = view
     update = update
```
